The App Garden

[Create an App](#) | [API Documentation](#) | [Feeds](#) | [What is the App Garden?](#)

First, we need to know whether or not your app is commercial.

Choose **Non-Commercial** if:

- Your app doesn't make money.
- Your app makes money, but you're a family-run, small, or independent business.
- You're developing a product which is not currently commercial, but might be in the future.
- You're building a personal website or blog where you are only using your own images.

[APPLY FOR A NON-COMMERCIAL KEY](#)

or

Choose **Commercial** if:

- You or your agency works for a major brand.
- AND one of the following:
- You want to make a profit.
 - You charge a fee for your product or services.
 - You will bring Flickr content into your product and intend to sell those services.

Importing Projects in to SOAP UI

Flickr API error: SSL is required ?

It's because communication is sent to the http API address instead of https. Change all http://api.flickr.com/ addresses in the plugin to https://api.flickr.com/ –

Google Maps API

<https://developers.google.com/maps/documentation/javascript/get-api-key>

The screenshot shows the Google Maps Platform documentation page for 'Get API Key'. The browser address bar shows the URL <https://developers.google.com/maps/documentation/javascript/get-api-key>. The page header includes the Google Maps Platform logo and navigation links: Overview, Products, Pricing, and Documentation. A search bar and a 'GET STARTED' button are also visible. The breadcrumb trail reads 'Web > Maps JavaScript API'. Below this, there are tabs for GUIDES, REFERENCE, SAMPLES, and SUPPORT. A blue banner states: 'New pricing changes went into effect on July 16, 2018. For more information, check out the [Guide for Existing Users](#).' The left sidebar contains a list of links, with 'Overview' and 'Get API Key' highlighted by a red box. The main content area is titled 'Get API Key' with a five-star rating. The text explains that to use the Maps JavaScript API, an API key is required for tracking requests, quota, usage, and billing. It also mentions that billing must be enabled separately. The 'Billing' section further clarifies that billing can be enabled separately (see [Usage and Billing](#)) or when getting the API key (see the [Quick guide](#)).

Get API Key

☆☆☆☆☆

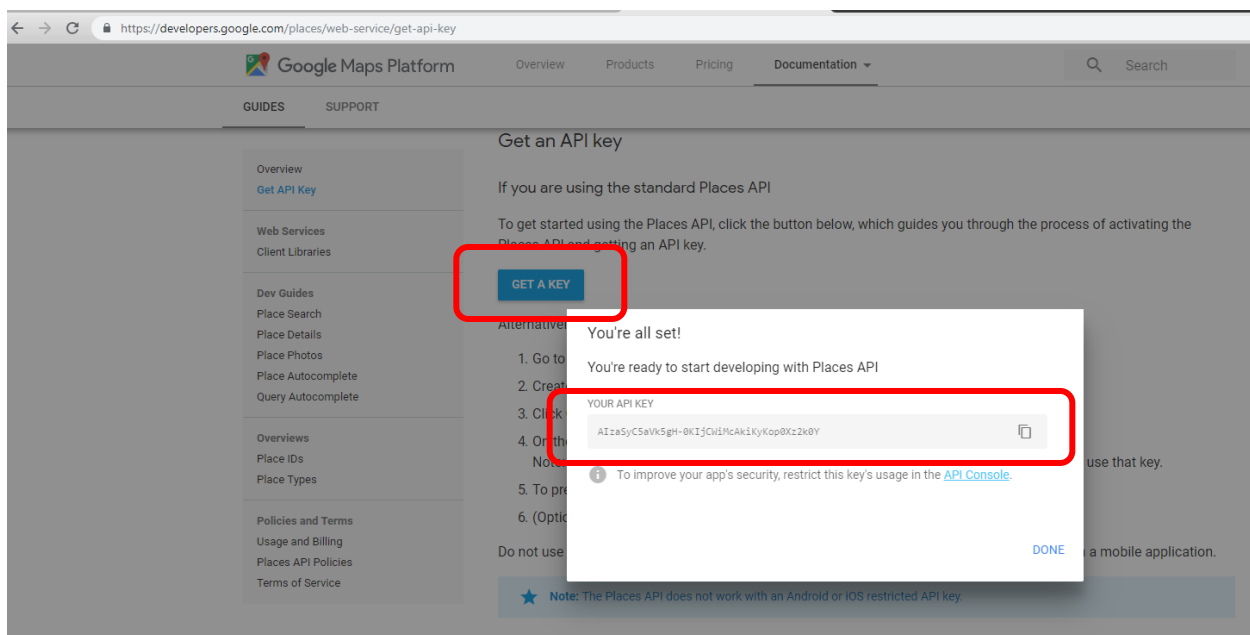

To use the Maps JavaScript API, you must get an API key which you can then add to your app or website. The API key is used to track API requests associated with your project for quota, usage, and billing. To learn more about API keys, see the [API Key Best Practices](#) and the [FAQs](#).

Billing

To use the Maps JavaScript API, you must enable billing. You can enable billing separately (see [Usage and Billing](#)) or when you get your API key (see the [Quick guide](#)).
