

# SOAPUI Pro (ReadyAPI) Installation

## Installation steps

1. Download the installer for your platform from the [ReadyAPI Downloads Center](#).
2. Run the installer. The installer will unpack the files and prepare them for installation:

3. If ReadyAPI is already installed on your computer, you will be asked if you want to update the current installation or to install the product anew to a different directory:

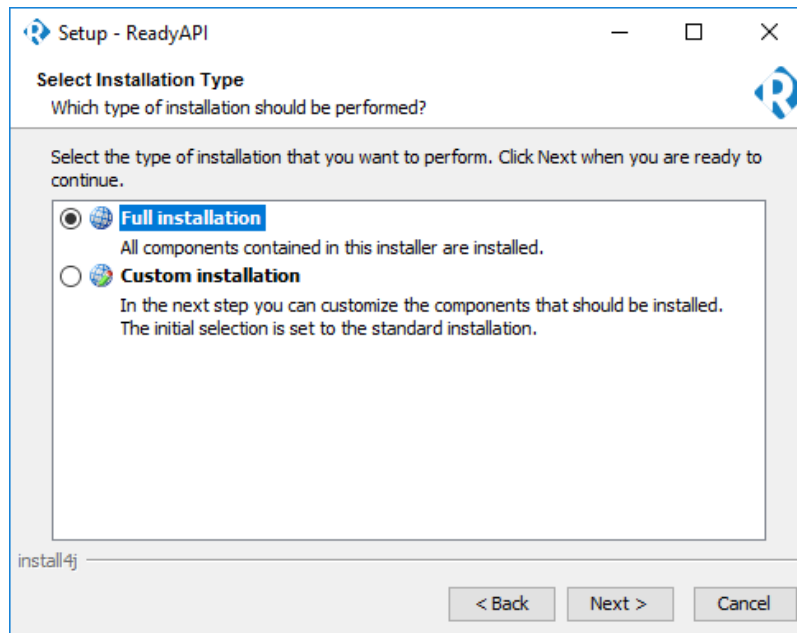

4. Select the needed option and click **Next**.

**Note:** This topic explains how to install the product for the first time. If you

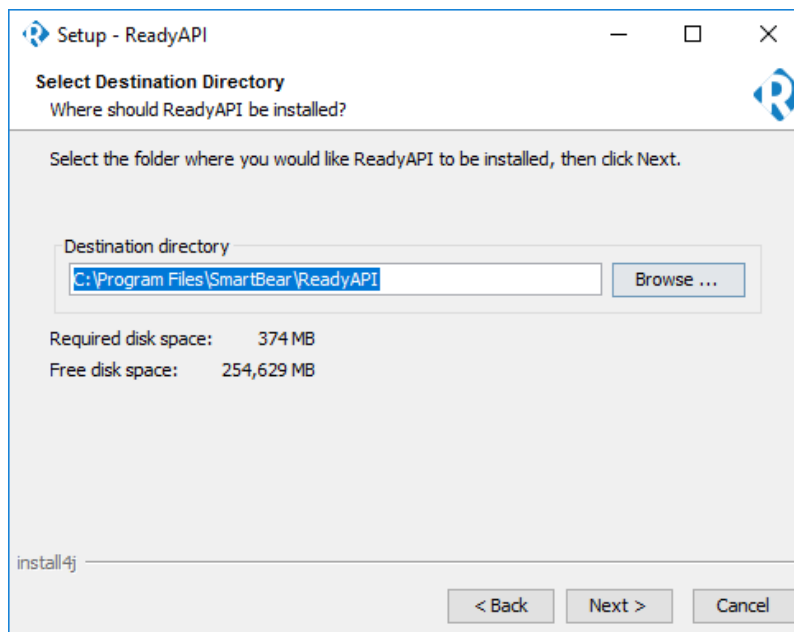

update your current installation, the steps may be different.

5. On the next page, select the installation mode:

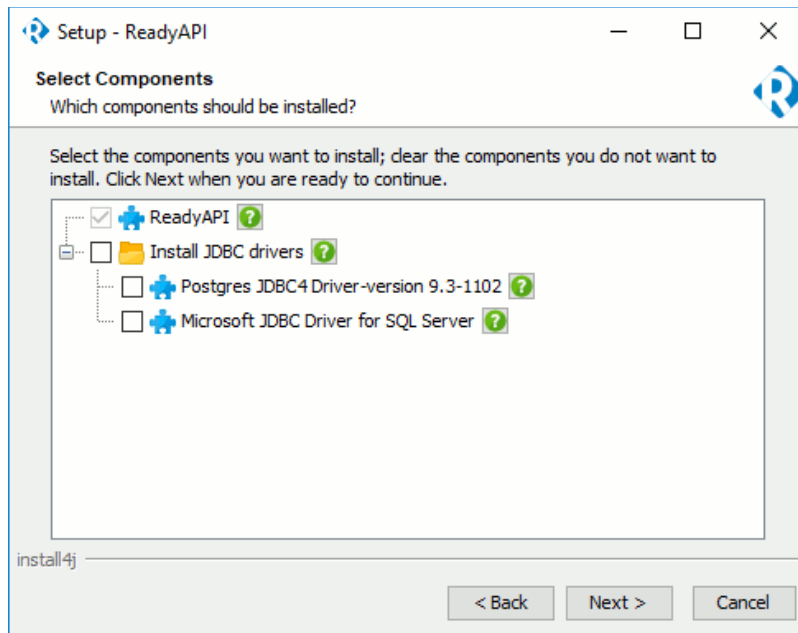

Select the needed option and click **Next**.

6. If you select **Custom installation**, the wizard will display two additional pages:
  - a. Specifying the installation folder:

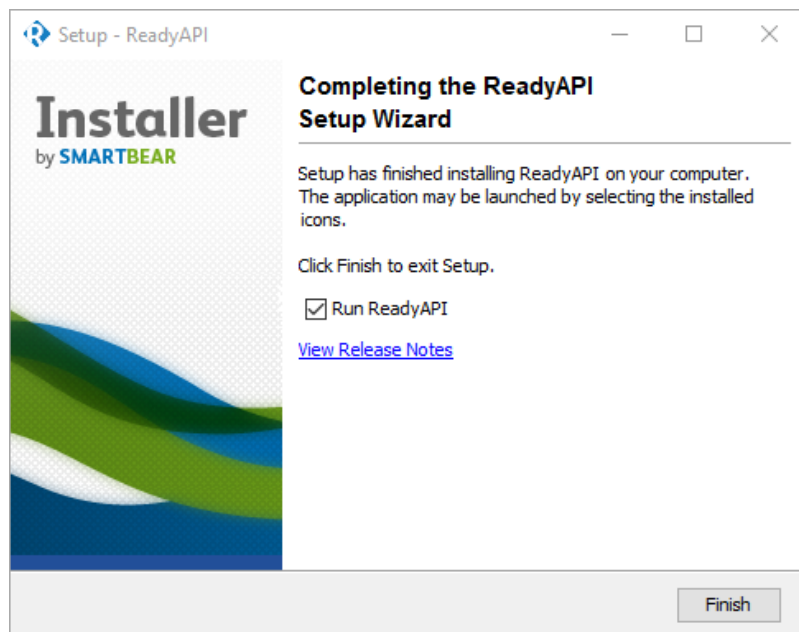

*Click the image to enlarge it.*

b. Selecting the components to install:

*Click the image to enlarge it.*

7. Click **Finish**.
